K. Hanvitha
Reddy.

Bug 1:-

- In the Task Repository Java file: & .SQL file (Backend SQL)
- when I chose OPEN option in the drop down, IN-PROGRESS Also appeared.
 - 2 Archived Tasks i.e ID 21 & 20 also appeared when "api" is searched in the Results.
 - This error happened because AND & OR condition were mixed with no brackets.
 - So I Added Brackets around the 2 conditions.

Bug 2:-

- In the Task Repository Java (Backend)
- If I wanted to search for 'api' the Reply for 'a' would arrive after the Reply for 'api'.
 - (i.e 1 letter = 0.95 ; 3 letters = 0.75)
 - To fix this I Removed 'thread.sleep' in the file ; which means I Removed the Pause.

Bug 3:-

In UseTask.js (front end)

- every search was accepted with out checking whether it was still the one user wants;
- late or old searches are overriding the newer ones
- Added the ignore flag & turned it as True so that old searches are thrown away.

Bug 4:-

In Task controller Java (Backend)

- If I put 'status = 400' (some invalid Value)
Instead of showing "Invalid status" it gave 500 error page.
- So I fixed it by give it a 400 with a clear "Invalid status" message.

Bug 5:-

In TaskController.java (Backend)

- If I put Page = 0 It is giving 500 white label error because the formula is $(Page - 1) \times size$ which gives us $(0 - 1) \times 10 = -10$.
So to fix this I've put few conditions:
 - Page must be atleast 1
 - Page size should be in b/w 1 & 100
- Otherwise It throws a 400 'Invalid Response error'

Bug 6:

In TaskController.java (Backend)

- If the user used '.' symbol the code treats it as a special character which means "anything" here in order to use '.' symbol normally I put a Back slash (\) in front of '.' & '-' so they are treated normally.

Ex
• (If I search for '.'; it considers as '. . .' and gives all 477 tasks instead of 0)

Bug 7:

In APP.TSX (frontend)

If a user Typed 'api' in

Page 1 it gave me 8 task

matches

where as if I typed 'api' in

Page 3 it gave 'No Tasks found'

so the user was Basically struck
at Page 3 although the
Results were being displayed

In Page 1

so I fixed it by Resetting the

Page to 1

or status changes.
